

cleanaer.™

Freedom to breathe, freedom to live!

Take a deep breath

Are you suffering from the effects of allergies, like 1 in 3 adults in the UK? Symptoms like red, itchy eyes, a blocked or runny nose, sneezing, difficulty breathing, a sore throat and / or headaches can often be signs of an allergy.

Allergy Causes

Allergies can come from many sources, both inside and outside your home, including:

- Dust mite allergen
- Cat allergen and other pet dander
- Indoor air pollutants including mould spores
- Cigarette smoke

A unique solution

Now there is a small, silent, efficient air purifier that clears the air in your home and office by reducing airborne particulates so you can enjoy the freedom to breathe and the freedom to live.

It's called Cleanaer™.

What is Cleanaer?

Cleanaer is an air purifier with multiple applications. Using the technology of electrostatics it provides a long-term solution for odour removal and air freshening, improving indoor air quality and helping people breathe more easily.

Cleanaer works by gently releasing microscopic particles called Liquid-ions. They float around on the air currents, attracting airborne particulates and locking them down, out of the air, so you can breathe more easily.

Cleanaer products:

- Are trusted by users and endorsed by the British Allergy Foundation
- Work 24 hours a day, 7 days a week
- Are completely silent
- Are small and compact (21cm x 4cm x 4cm in size)
- Are battery-operated (do not need to be plugged in)

Why choose Cleanaer?

Some products claim to reduce allergens, but they can also release harmful substances in the process. Many are bulky and only operate within a small area. Cleanaer is different, it

- Does not release ozone
- Does not use propellants or aerosols
- Cleans the air in the whole room – not just near the air purifier unit
- Is available in a Pure Allergy (fragrance free) variety
- Provides a long-lasting odour-removal solution

Rest assured...

- Cleanaer has been awarded the Allergy UK Seal of Approval for its ability to reduce house dust mite and cat allergen.
- Original tests were conducted in a 17m³ chamber but later tests have demonstrated a single Cleanaer unit can fragrance a room up to 152m³ in size.
- Cleanaer technology has been tested and verified by independent scientific bodies.
